

GRAIN MILLERS

2018 Grain Millers/Agricor
Recommended Food Corn Hybrid Lists

Version 3: 01/05/18

The following lists of hybrids are recommended by the staff of Grain Millers/Agricor for production and delivery to our facilities for the 2018 growing season. According to our research, these hybrids possess both very good agronomic traits and yields, as well as have very good to excellent milling performance for our needs for food corn production. Please note that following discussions with seed companies and reviewing quality data, we have once again added several hybrids to the lists for 2018 as well as deleting some previously offered hybrids that are no longer offered by the seed companies, or have demonstrated possible production and/or milling concerns.

Prior to the ordering/purchasing of seed corn of the hybrids listed below, AND again prior to sale and/or delivery of corn to the Agricor facility in Marion, IN, or the Grain Millers facility in St. Peter, MN growers are encouraged to review our most recent inbound grain specifications and ask any questions they may have regarding our sampling, grading, and testing of corn delivered to us. We have also included a copy of our Food-Quality Corn Production Booklet that we provide to our contract growers. This booklet is designed to be used as a resource for growers, to help them achieve our quality specifications.

While Grain Millers/Agricor does not limit our purchasing to only these hybrids, nor do we insist that our growers produce only these hybrids, we believe that these hybrids, coupled with good agronomic production and grain handling practices, provide the best opportunity for high quality yields, quality, premiums, and mill performance. We encourage growers to discuss these hybrids with seed company representatives (contact lists provided) to best match these hybrids with your soil type and production and management practices. Remember – **YOU ARE PRODUCING A FOOD INGREDIENT!** Also note – seed companies vary in their interpretations and definition of GMO technology presence in their hybrids. We highly encourage you to visit with a seed company representative to better understand their definitions of these technologies.

Non-GMO Food Grade Yellow Hybrids:

(The hybrids listed below are reported by the seed companies as produced with conventional plant breeding techniques, and without the addition and/or exposure to currently regulated GMO traits. Grain Millers/Agricor assumes no liability regarding the purity of the seed of the hybrids listed.)
