2024 GRAIN MILLERS RECOMMENDED FOOD CORN HYBRID LISTS: NON-GMO, ORGANIC, AND TRAITED

Version #2 released: February 26, 2024

The following lists of hybrids are recommended by the staff of Grain Millers, Inc. for production and delivery to our facilities for the 2024 growing season. According to our research, these hybrids possess strong agronomic traits, yields, and excellent milling quality. Note that following discussions with seed companies and reviewing quality data, we have proceeded to add – pending testing – several hybrids to the lists for 2024. Additionally, we have removed previously offered hybrids due to seed company discontinuation or production/quality concerns.

Prior to the ordering/purchasing of seed corn and prior to sale and/or delivery of corn to Grain Millers, Inc. facilities, growers are encouraged to review our most recent inbound grain specifications. Please ask any questions regarding our sampling, grading, and testing of corn delivered. You are encouraged to access and download a copy of our Food-Quality Corn Production Booklet from our website. This booklet is designed to be used as a resource for growers, to help them achieve food grade corn quality specifications.

While Grain Millers, Inc. does not limit our purchasing to only these hybrids, nor do we insist that our growers produce only these hybrids, we believe that these hybrids help to provide the best opportunity for high quality food grade corn production. We encourage growers to discuss these hybrids with seed company representatives to best match these hybrids with local soil types and management practices. Remember – YOU ARE PRODUCING A FOOD INGREDIENT! Please note, Grain Millers, Inc. does not currently accept Waxy or High Oil Hybrids.

Disclaimer: Seed companies vary in their interpretation and definition of GMO technology presence in their hybrids. We highly encourage you to visit with a seed company representative to better understand their definitions of these technologies. The hybrids listed below are reported by the seed companies as being produced with conventional plant breeding techniques, and without the addition and/or exposure to currently regulated GMO traits. Grain Millers, Inc. assumes no liability regarding the purity of the seed of the hybrids listed.

Dear Producer,

Thank you for contracting with Grain Millers, Inc. for the 2024 crop year. As stated in your contract, we require you to submit a grain sample before we take delivery on your contract. On the sample bag, fill out the required information completely with the following:

- Producer Name/Company Name
- Mailing Address
- Home telephone number and/or cell number
- E-mail address – this is very important as completed sample notifications will now be sent out electronically.
- Type of grain
- Conventional or Organic – marked if GF pick is required
- Variety
- Bin number(s) and volume in bin(s)

Each year we receive samples for grading and there is not enough of a sample to complete the required testing. Please ensure that the sample you are submitting is at least three pounds in weight.

Please also ensure that if handwriting the information on the sample bag(s), that it is legible to read. We receive many samples throughout the year that we have a very difficult time deciphering what is written on the bag(s).

Please ensure that the sample bag is closed securely so that it does not spill in transit.

Mail your sample to:

Grain Millers, Inc.
Attn: Specialty Corn Receiving
1626 S Joaquin Dr.
Marion, IN 46953

To receive sample grades, contact your buyer 10-14 days after sending in your sample. As always please do not hesitate to contact us with any questions.

Thank you,
Grain Millers Procurement
