

GRAIN MILLERS

U.S. CORN SAMPLE SUBMISSION GUIDE

Create a composite sample that is representative of the bin that you are submitting.

- It is best practice to gather a composite while filling your bin with the crop during harvest.
- Samples should not be acquired from bin doors.
 - If you do not have a sample of stored grain, use a probe to sample from both the bin door and roof. Sampling stored grain from the top and bottom will provide the best representation of quality or spoilage.
- It is best to have grain in selling condition before sending to Grain Millers to reduce the risk of smells or other quality concerns.

From a well-mixed composite sample, place 2-3 lbs of grain into a sample bag (available at our office locations), or other appropriately sized zip top plastic bag.

- Please ensure the zip top is sealed properly – do not overfill the sample bag.
- Grain loose in boxes, food containers, or in paper bags will not be accepted.

To ensure that our Receiving staff can properly analyze your sample, fill out a label with all the correct information that you have regarding:

- Name or Farm Entity
- Town
- Phone
- Email
- Commodity
- Hybrid
- **Organic, Non-GMO, Traited** (important)
- Bin or Field Number
- Volume (and any other remarks to be noted)

Place sample into a cardboard box that can fit the volume of your bag(s); place filler, such as newspaper or packing peanuts, in any open space in the box. Seal and ship to the following address:

Grain Millers, Inc.
